

THE DRESSAGE SIMULATOR

*Coming to Austin, TX!
November 13 - 21, 2010*

South location Nov 13-16 at Oakhaven Farm
North location Nov 17-21 at Royal Equus Farm

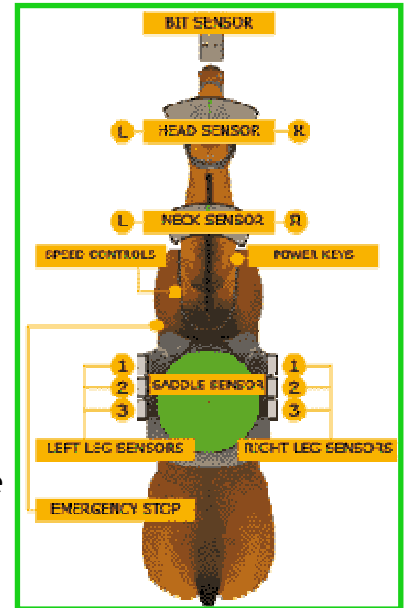

**The Dressage Simulator that works like a real horse without the attitude!
This horse is obedient to the rider's correctly (or incorrectly) applied aids at all times!
How often have you wished your horse could tell you
what you are doing wrong when you ride? The Dressage Simulator will.**

The Interactive Dressage Simulator is a new computerized, pressure sensor technology that simulates a life like horse. It is capable of performing movements from basic gaits, to lateral movements, to FEI movements such as tempi changes, pirouettes, and piaffe. The Simulator reacts based on exactly what the rider's seat, legs, and hands ask him to do.

Pressure sensors situated beneath the saddle clearly indicate balance and posture, if the rider's weight moves forward, backwards or sideways while riding. **Bit sensors** measure the amount of rein contact the rider is applying. A set of **leg sensors** measure the correct positioning and pressure applied by the rider's legs while performing various movements. There are even **head and neck sensors** which allow the rider to see when there is correct flexion.

This interactive feedback enables the rider to directly and instantaneously see the results of their riding skills, allowing for immediate correction. As a rider you will receive invaluable information about how you affect the horse, and what your horse has been feeling.

The Dressage Simulator is the ultimate opportunity for riders of all levels, beginner to FEI, to develop their riding skills in a controlled atmosphere with instantaneous feedback on the big screen in front of you. This unique dressage educational tool will improve your awareness and riding skills significantly.

ADU Members \$100 per training session
Non-ADU Members \$120 per training session

ADU auditors \$5/day
non-ADU auditors \$10/day
